# **Digiflow 505**

(Microprocessor Controlled Flow Indicator–Integrator)

## **Product Functions**

- Full scalable input signals 4 20mA analog or frequency
- 2 Inputs either two independent measuring, Dual range, median of two sensors or 2 different channels.
- Integration and indication of totals when time dependent signals.
- Simplified Programming.
- User Menus in Three Languages.
- Control of a Sensor-purge-unit.
- Data Logging Output.

### **Product Description**

The backlit two rows alphanumeric display shows the instantaneous readings of Flow or Totals, and the four key touchpad it is used to program and configure the unit.

The **DigiFlow 505** has per default one analog input 4 – 20mA each channel, as well as a frequency input.

A scaleable Pulse Output to drive external counters, 2 Relay Outputs for limit alarm, selectable Low or High and an RS232 interface are also standard features of the **DigiFlow 505**.

Optionally there are up to two scaleable Analog Outputs 4 – 20mA available.

Furthermore an optionally equipment to control a sensor purge unit can be ordered.

The RS232/RS485 Interface will output all parameters which are displayed. This can be done to a printer or a host computer.

An integrated real time clock is included to send protocols in selectable intervals, up to 9999min. Totals may be reset.

The Totals can be reset by pressing the related key on the keyboard or by a voltage input at the related rear-terminal jack.

The **DigiFlow 505** is powered by AC of 115/230 VAC 50/60 Hz. Optionally voltages between 24 and 28 V AC/DC.

The **DigiFlow 505** provides an adjustable voltage of 18V DC for powering sensors. Maximum current is 100mA.

#### Inputs

Since the **DigiFlow 514** scaleable integrates any physical unit which is converted into 4-20mA analog or frequency

#### General:

Display:	Backlighted, alphanumeric LC-Display, 16 cols. Each char is 0.413" high.		
Keyboard:	Sealed membrane keyboard with four keys.		
Transmitter supply:	18 V / 100 mA; via keyboard adjustable, isolated.		
Power:	115/230 V AC; 50/60 Hz internally switchable.		
	Optionally 24-28 V AC/DC		
	Power consumption 10 W @ 230 V AC		
	without Options.		
Operating Tempera-			
ture:	32-131 °F		
Housing:	Enclosure: glass-fiber reinforced synthetic material; Front: aluminum keyboard membrane.		
Face:	Watertight to IP 54 (NEMA 4X equal)		
Dimensions:	5.7" W 2.8" H 5.1" D		
Panel cutout:	5.4" W 2.6" H		

Picture similar to DigiFlow 505

signal, the user have to enter a dimension text with up to 5 characters length.

The input signals aren't converted only linearly. Also nonlinear relationships of input-to output quantity can be programmed. Additional to the predefined exponents of the conversion curve for linear, square or square root relationship of  $y = A^{E}$ , a free setable exponent can be entered. If none of these conversion terms describes exactly the relationship between input and output, a 12 point correction curve can be programmed

The most common use of the **DigiFlow 505** is as flow indicator . Mos types of flowmeters can be used

Including:

- Linear frequency producing flowmeters like (VOR-TEX), turbines or positive displacement.
- Non-linear frequency producing flowmeters. A 12 point correction curve can be programmed to linearize the signal.
- Volumetric flowmeters with outputs of 4 20mA such as (VORTEX) or turbine meters with a frequency to current converter on the output.
- Differential Pressure devices for ITABAR-sensors or orifice plates, where a square law relationship applies.
- Linear Differential Pressure devices where the 4 20mA output is proportional to the flow rate.
- Dual Range Differential Pressure devices where two separately spanned transmitters are used across a common flow device (ITABAR-sensor).
- Non-linear Differential Pressure devices like laminar flow tubes.
- Signal of two transmitters at one test point can be weighted added into one flow signal.

#### **Communication Port:**

Type:	An RS232 interface is provided. Option- ally there is a RS485 multipoint communi- cation interface for up to 32 instruments
	connected to a common bus.
Baud Rate:	300 - 9600 Baud.
Data Bits:	7 or 8 selectable.
Parity:	None, even or odd.
Stop Bits:	1 or 2 selectable.
Data logging:	Output in intervals up to 9999 min or by
	key stroke.

#### Relay Output:

Function:

Form: Max. Voltage Max. Current High– and Low–flow rate alarms based on the flow rate. Normally open. (SPST) 250 V AC 6 A AC

#### Programming and Configuration:

#### **Options:**

<b>T 1</b> 11			
Handheld:	There is no handheld terminal required.	Analog Outputs:	
Language:	All necessary constants and parameters are programmed using the keypad. German, English or French selectable.	Function:	Selectable: Output current proportional to standard display. Setpoints at 4 mA and
Sungange.	Seriali, English of French Serectable.		20 mA, linear interpolation between.
		Output Span:	0 - 20 mA or $4 - 20$ mA selectable.
Frequency Input:		Resolution:	12 Bit
		Max. Load:	500 internally powered.
Frequency Range:	0.25 - 10 kHz Input 1.		800 externally 24 V powered.
	0.25 - 500 Hz Input 2.	Powering:	If there is no external supply >15V the
Input Circuits:	Most AC, logic and proximity switches accepted. 0.5 – 50 V <sub>pp</sub> .		output will be internal powered automati- cally.
Non-Linear Correc-	Photo		cuity.
tion:	Up to 12 points for curve fit.		
		Control of a Sen- sor-Purge-Unit:	
Analog Input 4 – 20	mA:		
		Function:	Two relays control the solenoid activated
Inputs:	2 for flow (split range).		valves of a Sensor Purge Unit. During the
Input Impedance:	120 .		purging time and an additional selectable
Circuit:	All inputs are isolated, no common		time after purging, the flow input is main-
	ground.	(T) 1	tened.
		Time between	10 minutes to 31 days 23 hours 50 min-
Pulse Output:		purging: Burge Duration	utes. 1 to 999 s
r use output		Purge Duration: Time Constant:	1 to 99 s
Pulse Width:	Adjustable between 10 ms and 90 ms.	rane constant.	10773

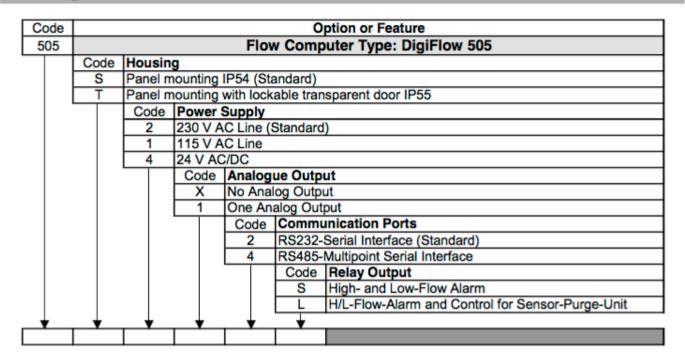

Pulse Width:	Adjustable between 10 ms and 90 ms.
Duty Cycle:	1:1.
Logic:	Open Collector, Active Low.
Current sinking:	max. 100 mA.
Pulse generation:	The pulse count is proportional to the
	counter difference in selectable units of 10
	(1, 10, 100,100000).

#### External Keyboard:

Function:	One input controls the display and one
	input resets the total-counters.
Circuit:	An input voltage higher than +18 V is
	detected.
